

## 5: Part 1 - Data Visualization Basics

Environmental Data Analytics | John Fay and Luana Lima | Developed by Kateri Salk

Fall 2023

### List of Figures

1	Scatterplot . . . . .	3
2	Scatterplot . . . . .	4
3	Scatterplot . . . . .	4
4	Scatterplot . . . . .	5
5	Scatterplot . . . . .	5
6	Scatterplot . . . . .	6
7	Scatterplot . . . . .	7
8	Another scatter plot . . . . .	7
9	Another scatter plot . . . . .	8
10	Another scatter plot . . . . .	9
11	Another scatter plot . . . . .	9

### Objectives

1. Perform simple data visualizations in the R package `ggplot`
2. Develop skills to adjust aesthetics and layers in graphs
3. Apply a decision tree framework for appropriate graphing methods

### Opening discussion

Effective data visualization depends on purposeful choices about graph types. The ideal graph type depends on the type of data and the message the visualizer desires to communicate. The best visualizations are clear and simple. A good resource for data visualization is Data to Viz, which includes both a decision tree for visualization types and explanation pages for each type of data, including links to R resources to create them. Take a few minutes to explore this website.

### Set Up

```
library(tidyverse);library(lubridate);library(here)
library(ggribes)

here()
```

```
## [1] "/Users/justinmaynard/Fall_2023_EDE"
```

```
PeterPaul.chem.nutrients <-  
  read.csv(here("Data/Processed_KEY/NTL-LTER_Lake_Chemistry_Nutrients_PeterPaul_Processed.csv"), stringsAsFactors = T)  
PeterPaul.chem.nutrients.gathered <-  
  read.csv(here("Data/Processed_KEY/NTL-LTER_Lake_Nutrients_PeterPaulGathered_Processed.csv"), stringsAsFactors = T)  
EPAair <- read.csv(here("Data/Processed_KEY/EPAair_03_PM25_NC1819_Processed.csv"), stringsAsFactors = T)  
  
EPAair$Date <- ymd(EPAair$Date)  
PeterPaul.chem.nutrients$sampldate <- ymd(PeterPaul.chem.nutrients$sampldate)  
PeterPaul.chem.nutrients.gathered$sampldate <- ymd(PeterPaul.chem.nutrients.gathered$sampldate)
```

## ggplot

ggplot, called from the package `ggplot2`, is a graphing and image generation tool in R. This package is part of tidyverse. While base R has graphing capabilities, ggplot has the capacity for a wider range and more sophisticated options for graphing. ggplot has only a few rules:

- The first line of ggplot code always starts with `ggplot()`
- A data frame must be specified within the `ggplot()` function. Additional datasets can be specified in subsequent layers.
- Aesthetics must be specified, most commonly x and y variables but including others. Aesthetics can be specified in the `ggplot()` function or in subsequent layers.
- Additional layers must be specified to fill the plot.

## Geoms

Here are some commonly used layers for plotting in ggplot:

- `geom_bar`
- `geom_histogram`
- `geom_freqpoly`
- `geom_boxplot`
- `geom_violin`
- `geom_dotplot`
- `geom_density_ridges`
- `geom_point`
- `geom_errorbar`
- `geom_smooth`
- `geom_line`
- `geom_area`
- `geom_abline` (plus `geom_hline` and `geom_vline`)
- `geom_text`

## Aesthetics

Here are some commonly used aesthetic types that can be manipulated in ggplot:

- `color`
- `fill`
- `shape`
- `size`
- `transparency`

## Plotting continuous variables over time: Scatterplot and Line Plot

```
# Scatterplot
ggplot(EPAair, aes(x = Date, y = Ozone)) +
  geom_point()
```

Figure 1: Scatterplot

```
O3plot <- ggplot(EPAair) +
  geom_point(aes(x = Date, y = Ozone))
print(O3plot)
```

```
# Fix this code
O3plot2 <- ggplot(EPAair) +
  geom_point(aes(x = Date, y = Ozone), color = "blue")
print(O3plot2)
```

```
# Add additional variables
# How could you automatically assign a marker color to a variable?
PMplot <-
  ggplot(EPAair, aes(x = Month, y = PM2.5, shape = as.factor(Year), color = Site.Name)) +
  geom_point()
print(PMplot)
```

```
# Separate plot with facets
# Create plots for each facet
PMplot.faceted <-
  ggplot(EPAair, aes(x = Month, y = PM2.5, shape = as.factor(Year))) +
  geom_point() +
  facet_wrap(vars(Site.Name), nrow = 3)
print(PMplot.faceted)
```

Figure 2: Scatterplot

Figure 3: Scatterplot

Figure 4: Scatterplot

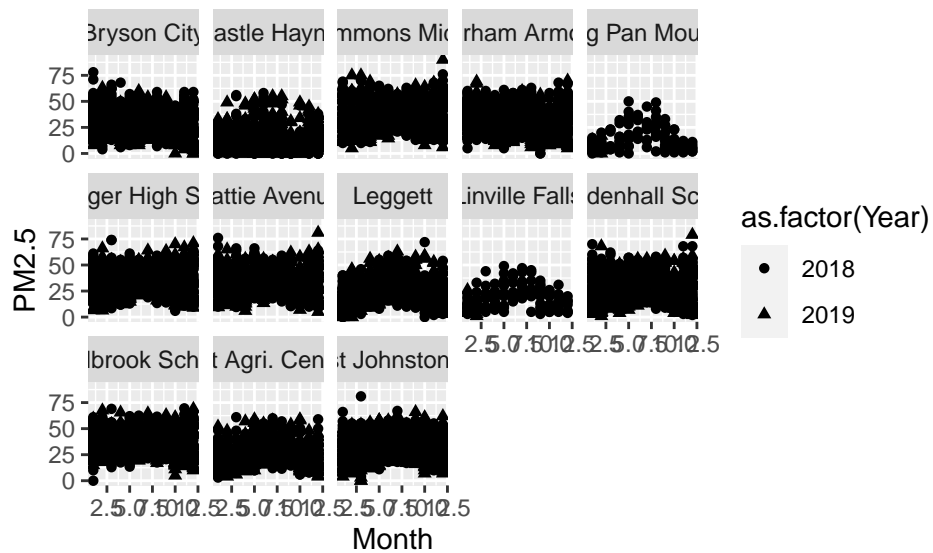

Figure 5: Scatterplot

```

# Filter dataset within plot building and facet by multiple variables
#Use subset(dataframe, filter characteristics)
PMplot.faceted2 <-
  ggplot(subset(EPAair, Site.Name == "Clemmons Middle" | Site.Name == "Leggett" |
    Site.Name == "Bryson City"),
    aes(x = Month, y = PM2.5)) +
  geom_point() +
  facet_grid(Site.Name ~ Year)
print(PMplot.faceted2)

```

Figure 6: Scatterplot

```

# Plot true time series with geom_line
PMplot.line <-
  ggplot(subset(EPAair, Site.Name == "Leggett"),
    aes(x = Date, y = PM2.5)) +
  geom_line()
print(PMplot.line)

```

Plotting the relationship between two continuous variables: Scatterplot

```

# Scatterplot
lightvsDO <-
  ggplot(PeterPaul.chem.nutrients, aes(x = irradianceWater, y = dissolvedOxygen)) +
  geom_point()
print(lightvsDO)

```

```

# Adjust axes
lightvsDOfixed <-
  ggplot(PeterPaul.chem.nutrients, aes(x = irradianceWater, y = dissolvedOxygen)) +

```

Figure 7: Scatterplot

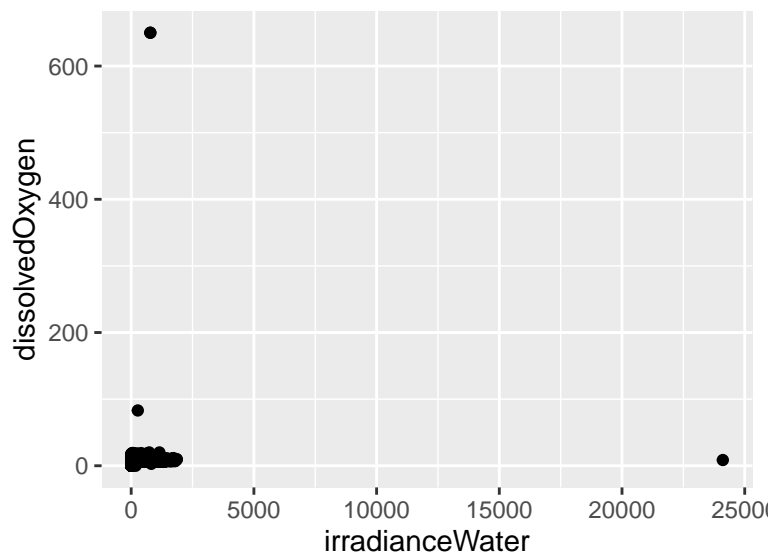

Figure 8: Another scatter plot

```
geom_point() +
xlim(0, 250) +
ylim(0, 20)
print(lightvsDOfixed)
```

Figure 9: Another scatter plot

```
# Depth in the fields of limnology and oceanography is on a reverse scale
tempvsdepth <-
  ggplot(PeterPaul.chem.nutrients, aes(x = temperature_C, y = depth)) +
  ggplot(PeterPaul.chem.nutrients, aes(x = temperature_C, y = depth, color = daynum)) +
  geom_point() +
  scale_y_reverse() #Flips scale
print(tempvsdepth)
```

```
NvsP <-
  ggplot(PeterPaul.chem.nutrients, aes(x = tp_ug, y = tn_ug, color = depth)) +
  geom_point() +
  geom_smooth(method = lm) + #trendline
  geom_abline(aes(slope = 16, intercept = 0))
print(NvsP)
```

```
## 'geom_smooth()' using formula = 'y ~ x'
```

## Plotting continuous vs. categorical variables

A traditional way to display summary statistics of continuous variables is a bar plot with error bars. Let's explore why this might not be the most effective way to display this type of data. Navigate to the Caveats page on Data to Viz (<https://www.data-to-viz.com/caveats.html>) and find the page that explores barplots and error bars.

Figure 10: Another scatter plot

Figure 11: Another scatter plot

What might be more effective ways to display the information? Navigate to the boxplots page in the Caveats section to explore further.

```
# Box and whiskers plot
#Color = contour of shape
#Fill = color of the fill of boxplot, use color with boxplots
Nutrientplot3 <-
  ggplot(PeterPaul.chem.nutrients.gathered, aes(x = lakename, y = concentration)) +
  geom_boxplot(aes(color = nutrient)) # Why didn't we use "fill"?
print(Nutrientplot3)
```

```
# Dot plot
Nutrientplot4 <-
  ggplot(PeterPaul.chem.nutrients.gathered, aes(x = lakename, y = concentration)) +
  geom_dotplot(aes(color = nutrient, fill = nutrient), binaxis = "y", binwidth = 1,
    stackdir = "center", position = "dodge", dotsize = 2) #stack based on center position, p
print(Nutrientplot4)
```

```
# Violin plot
Nutrientplot5 <-
  ggplot(PeterPaul.chem.nutrients.gathered, aes(x = lakename, y = concentration)) +
  geom_violin(aes(color = nutrient)) #
print(Nutrientplot5)
```

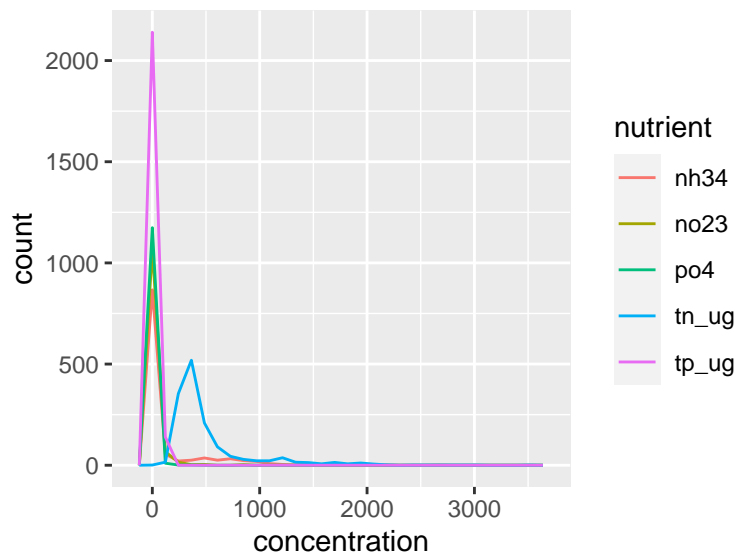

```
# Frequency polygons
# Using a tidy dataset
Nutrientplot6 <-
  ggplot(PeterPaul.chem.nutrients) +
  geom_freqpoly(aes(x = tn_ug), color = "darkred") +
  geom_freqpoly(aes(x = tp_ug), color = "darkblue") +
  geom_freqpoly(aes(x = nh34), color = "blue") +
  geom_freqpoly(aes(x = no23), color = "royalblue") +
  geom_freqpoly(aes(x = po4), color = "red")
print(Nutrientplot6)
```

```
## 'stat_bin()' using 'bins = 30'. Pick better value with 'binwidth'.
## 'stat_bin()' using 'bins = 30'. Pick better value with 'binwidth'.
## 'stat_bin()' using 'bins = 30'. Pick better value with 'binwidth'.
## 'stat_bin()' using 'bins = 30'. Pick better value with 'binwidth'.
## 'stat_bin()' using 'bins = 30'. Pick better value with 'binwidth'.
```

```
# Using a gathered dataset
Nutrientplot7 <-
  ggplot(PeterPaul.chem.nutrients.gathered) +
  geom_freqpoly(aes(x = concentration, color = nutrient))
print(Nutrientplot7)
```

```
## 'stat_bin()' using 'bins = 30'. Pick better value with 'binwidth'.
```

```

# Frequency polygons have the risk of becoming spaghetti plots.
# See <https://www.data-to-viz.com/caveat/spaghetti.html> for more info.

# Ridgeline plot
#Used fill as wanted to fill below the curve
Nutrientplot6 <-
  ggplot(PeterPaul.chem.nutrients.gathered, aes(y = nutrient, x = concentration)) +
  geom_density_ridges(aes(fill = lakename), alpha = 0.5) #
print(Nutrientplot6)

```

```
## Picking joint bandwidth of 10.9
```
